| **Affects version:** | 3.8 | | |

**Description**

Hi. Audacious freezes randomly while playing audio.

To be more specific, I am using the Winamp skin and with EQ on.
Audio playing were Vorbis and SPC files.
No other customization done.

This does not happen in the older versions where SDL was used for audio output, so I guess it has something to do with the new Win32 waveOut audio output plugin.

Cheers,

*- File waveout.dll added*

Can you try this patched version and see if it fixes the lockup?  Replace the existing file:

```
<installation folder>/lib/audacious/Output/waveout.dll
```

Hi. Thank you for your time.

The file has been downloaded and replaced. Audacious is doing fine at the moment (15 minutes after replacement), though testing for such issue takes time and luck.

Thanks.
