Affects version:			

Description

One sometimes uses the computer just as a hifi and an option to inhibit suspend (not screensaver) is necessary for this.

Regards.

There is no standard way of doing this, to my knowledge. You can look up the relevant commands for your system and use a script to call them when you start Audacious.

#2 - January 12, 2018 14:47 - Volker Bethke

I would like this bug to be reopened, because there is a standard (via systemd / dbus) now for this:

https://www.freedesktop.org/wiki/Software/systemd/inhibit/

There should be at least a plugin available for that.
