Description

In most other audio jukbox'es queue manager is implemented as a special system playlist (e.g. called "Play Queue").

This solution has several serious advantages:

1) You can see all queued songs at a glance
2) There's no need to clutter the interface with an extra queue column in a playlist
3) You can easily wipe the queue and reorder the songs to be played

If this feature request is to be implemented then the queue column can be be safely dropped/removed altogether freeing space and making the UI less cluttered.

Just rejected? OK, John, I'm not going to file any new feature requests - it seems like your vision of Audacious UI is the only right one. It makes sense to publicly announce this policy - "No serious UI feature requests are accepted, we know better how Audacious should work and look like".

Cheers.
