Affects version:	3.3			

Description

Hello, since v3.3 it's no longer possible to search the library by genre (i.e. in Search Tool, typing "Rock" would return "Genre: Rock" and then you could double-click that to create a playlist of all Rock songs in your library).

I like to have tabs for each genre of music, and when I add music of a particular genre to the library, I would like to easily update that genre's tab by searching for that genre. Importing/Exporting playlist files everytime or sorting library by genre and manually selecting the songs everytime is rather cumbersome.

Ty devs, for this awesome XMMS successor :)

History
