Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Bug #334

[PATCH] file writer flac does not write tags

August 24, 2013 01:05 - James Buren

Status:	Closed		**Start date:**	August 24, 2013
Priority:	Minor		**Due date:**	
Assignee:			**% Done:**	100%
Category:	plugins/filewriter		**Estimated time:**	0.00 hour
Target version:	3.4.1			
Affects version:	3.4			

Description

Due to how this is written, the tags do not get written to the FLAC file that is created by the plugin. The attached patch fixes 5 issues.

1) A switch case in insert_vorbis_comment() did not include a break statement, so string tags would not be inserted because the default case has a return statement.

2) The metadata object is allocated on the stack and is not managed by libFLAC, resulting in a memory leak. It is now a static global variable.

3) The encoder and metadata objects are both handled properly now when the file is closed. Pointers are NULL checked, freed, and reset to NULL now.

4) FLAC__stream_encoder_init_stream() must be called after the metadata is set. Otherwise the call will fail.

5) FLAC vorbis comments should be in uppercase, as that is what the official encoder does.

Also, the compression level is now set to 8, the maximum. Please apply this patch.

History

#1 - August 24, 2013 18:42 - John Lindgren

This is a good start, but making flac_metadata static introduces another leak. See if you can figure out why.

Edit: Never mind, the leak I'm thinking of shouldn't happen in normal operation.

DO NOT EVER add arbitrary changes like this to an otherwise legitimate bug-fix patch.

Actually, Vorbis comments are case-insensitive, so either way is fine.
