Affects version:	3.4.3		

Description

Hi... I'm using Audacious 3.4.3 on an Archlinux 64bit box

Since GTK3 libs have been updated to version **3.10.6** (now we have **3.10.7**), I noticed a weird behaviour with song info window :

If you want to display song info for a song with a quite long path, the path itself is written all in one line and it is not wrapped as usual; then the window is displayed really too wide and remain to wide for all the session even if you choose any other song with a short path.

If you close Audacious, then run it again, and choose, initially, a song with a "short" path, the windows is displayed correctly then if you choose another song with a long path, the path itself is wrapped and the window is always displayed correctly.

I hope that the issue description is quite clear. Anyway I attached a webm screencast that describe the issues

regards
Andrea

3.10.5 is also not working for me, but 3.10.4 [1] is fine.

Apparently `gtk_widget_set_size_request()` does not affect the label width.
Using `gtk_label_set_max_width_chars()` in "audacious/infowin.c" works though.

This sounds like a bug of GTK, the documentation is even mentioning `gtk_widget_set_size_request()`.

This affects 3.4.x but not Git master, yes?

#3 - February 04, 2014 18:10 - Thomas Lange

Correct, 3.5 is not affected because the infowin size gets saved.

#4 - February 18, 2014 02:42 - John Lindgren

- Category set to libaudgui

- Status changed from New to Closed

- Target version changed from 52 to 3.5

- % Done changed from 0 to 100

Fixed:

<https://github.com/audacious-media-player/audacious/commit/2f5b0c7146cfa654e5b71b73427605c4949f8825>

The GtkLabel documentation is out of date and just plain wrong for GTK+ 3.x. For more info:

https://bugzilla.gnome.org/show_bug.cgi?id=662043
