

Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Bug #433

Audacious crashes on CYGWIN

April 16, 2014 19:13 - Carlo Bramini

Status:	Rejected	Start date:	April 16, 2014
Priority:	Minor	Due date:

Category:		Estimated time:	0.00 hour
Target version:			
Affects version:	3.5-beta1		

Description

I have configured and compiled successfully on CYGWIN both Audacious and its plugins.

If it is launched from xterm, the player shows itself on the X server.

However, it brutally crashes as soon as some functions are selected, for example when the user tries to open a new file and after doing some debugging with printf() on the console, the origin of the crash seems to be into src/libaudgui/ui_fileopener.c, in the function create_filebrowser(), at least apparently.

When the execution reaches this line:

```
gtk_container_add(GTK_CONTAINER(window), vbox);
```

the crash happens.

Both 'window' and 'vbox' are not NULL.

However, I must say that it also crashes in other circumstances, not related to the previous case, for example when opening the properties of the file writer plugin.

I have not idea about what it happens, however I signal the fact, perhaps there is an issue hidden somewhere, for some reasons not visible on other platforms but highlighted on CYGWIN. GTK+ is version 3.10.7.

- Status changed from New to Rejected

We do not support Cygwin, and I do not have time to spend on "perhaps there is an issue hidden somewhere". Feel free to investigate this further on your own, but there is no point in reporting it here until you can identify the actual bug.
