| I'm using 2 screens with an extended desktop configuration.<br>Audacious works properly in one of them but when I use it in the other one, Audacious raises the menu in the other screen. |        |                        |               |

#### History

##### #1 - June 11, 2014 11:08 - Jorge Felez

Some info:  
Windows 7 Enterprise, 64 bits.  
Using Intel graphics.

It works OK in the Second display (Built-in Display) and fails in the Primary Display (Digital Display)

##### #2 - June 11, 2014 22:08 - John Lindgren

Yeah, I've noticed this too. Bug in GTK+, probably won't be fixed until the switch to Qt (unless someone knows of a patch).

##### #3 - August 09, 2014 20:21 - John Lindgren

- Status changed from New to Closed
- Target version set to 3.6
- % Done changed from 0 to 100

Fixed in master by switching back to GTK2.
