Target version:	3.7		
Affects version:	3.2.1		
Description			
Hi,			
I just installed Audacious 3.2.1 on Ubuntu 11.04, and wanted to address some issues in sequence. This is first one			
Seems like AdPlug is form ancient XMMS version. Output is mono, w/o even thinking about surround.h from AdPlug 2.2, which is default set for AdPlay for example			
Even so, channel mixer plugin doesn't seem to be able to upmix mono to stereo (double mono) nor some LADSPA plugins I tried			
Can you please consider updating AdPlug plugin or just adding an option in AdPlug plugin for double mono?			
Thanks

Porting AdPlug to Audacious is non-trivial because the upstream source has no support for a virtualized file system. If you would like to work on it, go ahead.

OK, unfortunately I have no such skills. I thought it wouldn't be that hard, but seems it is. Cheers

Uhm, no? binio_virtual.h can be trivially reworked to be used in combination with something that subclasses CAdPlug::factory. This is infact necessary for the foobar2000 adplug plugin.

Well, when I tried, there were other modifications that would have been necessary, besides binio_virtual.h. If you can see a trivial way to update the plugin, then please commit it.
