

## Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Feature #732

### Add configuration option to disable recursion in directories

July 23, 2017 23:51 - Cristian Rigamonti

<b>Status:</b>	Closed	<b>Start date:</b>	July 23, 2017
<b>Priority:</b>	Minor	<b>Due date:</b>	
<b>Assignee:</b>		<b>% Done:</b>	100%
<b>Category:</b>		<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	3.10		
<b>Affects version:</b>	3.7.2		
<b>Description</b>			
Currently when running			
<pre>audacious my_dir</pre>			
the program adds all media contained in my_dir and all its subdirectories; the same happens in the GUI when selecting a directory with the "open" or "add" commands.			
Sometimes one only wants media contained in the directory, without scanning all its subdirectories. E.g. I sometimes by mistake run audacious on a directory which has LOTS of subdirs, sometimes even my \$home: a massive scan for subdirs starts, and I can't stop it even exiting the program GUI, I have to kill -9 all the audacious processes. You can think of other use cases.			
Please add a configuration option to enable/disable recursion into subdirectories.			
(audacious 3.7.2 on Linux)			

#### History

##### #1 - September 16, 2017 04:05 - Jim Turner

- File *patchbug732.diff* added

Will this do for starters?

Added boolean config option [audacious].no\_subdirs that if set to TRUE stops recursive addition of subdirectories, along with gui checkbox in [Settings].[Playlist] for gtk & qt. FALSE || undef: keep current behavior.

##### #2 - September 20, 2017 01:53 - John Lindgren

- Description updated

- Status changed from New to Closed

- Target version set to 3.10

- % Done changed from 0 to 100
