Description

Greetings to the entire team from Bosnia,

I am a new member here on this forum. Can someone help me or indicate if there is a plugin or some other plugin to set the ability within Audacious to play a specific file or a music track at a specific time. For example at 4:45 p.m.?
So, to stop the current music song that is being broadcast and to start broadcasting the second music track set at the specified time at 16:45.

That would be very helpful.
Thanks in advance everyone!

You could use something like the "at" command to run audtool and switch to the next song. The audtool manual page has more information.

- Status changed from New to Closed

I hope that solution worked for you. Closing since it's been a little while.
