Description

You've made a nice clean responsive player, that is very sturdy...
I thank you for all your dedication.

I am wondering if you would consider implementing an option (in settings) to increase the font size in the playlist (of the GTK interface) ... Most shortsighted need a font of at least 18 to 26.

More importantly, the player controls also need an enlargement of 100 percent (that means the option to make them double the current size).

Thank you for reading.
