Description

D-Bus support is not working on Windows when running in Qt mode, because Qt is not running a GLib main loop there.

We could try to recompile Qt on Windows with GLib support, but I'm not certain if this would work (there may be parts of Qt that depend on using QEventDispatcherWin32).

Probably a more portable solution would be to modify dbus-server.cc to run its own main loop in a dedicated thread for D-Bus operations.
