

## Audacious - Bug #1050

### [i18n] Missing Qt translations

January 09, 2021 21:28 - Arek Kentski

<b>Status:</b>	Rejected	<b>Start date:</b>	January 09, 2021
<b>Priority:</b>	Minor	<b>Due date:</b>	
<b>Assignee:</b>		<b>% Done:</b>	0%
<b>Category:</b>	plugins/qtui	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	4.1		
<b>Affects version:</b>	4.1		
<b>Description</b>			
Non-English locale, some Qt-based elements (like certain context menus and dialog windows) are in English. The GTK mode is fine (all translated). Tested with audacious-4.1-beta1-win32.			

### History

#### #1 - January 10, 2021 01:01 - Thomas Lange

Thanks, but this has already been reported as [#569](#).  
At least we know now this occurs on Windows as well.

#### #2 - January 10, 2021 04:44 - John Lindgren

Is it just files missing from the installer/zip file?

I honestly don't know how to test translations under Windows. In Linux you can just change the LANG variable. I don't know what the Windows equivalent is.

I honestly don't know how to test translations under Windows. In Linux you can just change the LANG variable. I don't know what the Windows equivalent is.

I don't really know. It seems that the "translations" folder filled with \*.qm files is required and that folder must be "enabled" in app's source code.

#### #4 - January 10, 2021 13:27 - Thomas Lange

Arch Linux for example provides the package qt5-translations:  
<https://archlinux.org/packages/extra/any/qt5-translations/files/>

The Windows Qt build should probably ship the required qm files as well.  
But we also have to import them via code, see my original patch in [#569](#).

In Linux you can just change the LANG variable. I don't know what the Windows equivalent is.

I think we should first make sure it works on Linux, afterwards we can tackle the Windows Installer.

- *Status changed from New to Rejected*

Closing as duplicate of [#569](#) (which is now fixed).
