Description

Hi,

While the new 4.1 package built successfully in Ubuntu 18.04 and higher, it has following error on Ubuntu 16.04:

```
dwz: Section offsets in debian/audacious/usr/bin/audacious not monotonically increasing
dwz: Section offsets in debian/audacious/usr/bin/audtool not monotonically increasing
dwz: Too few files for multifile optimization
dh_dwz: warning: No dwz multifile created, but not explicitly requested either so ignoring it.
dh_dwz: warning: Common issues include no debug information at all (missing -g) and
dh_dwz: warning: compressed debug information (#931891).
dwz: Section offsets in debian/libaudcore5/usr/lib/x86_64-linux-gnu/libaudcore.so.5.3.0 not monotonically increasing
dh_dwz: error: dwz -- debian/libaudcore5/usr/lib/x86_64-linux-gnu/libaudcore.so.5.3.0 returned exit code 1
debian/rules:15: recipe for target 'binary' failed
make: *** [binary] Error 25
dpkg-buildpackage: error: fakeroot debian/rules binary gave error exit status 2
```

Not sure what's the problem after Googling, so here to ask for help. And the full building log is here:

https://launchpadlibrarian.net/521321447/buildlog_ubuntu-xenial-amd64.audacious_4.1-0build2~ubuntu16.04_BUILDING.txt.gz
