

Audacious - Feature #1067
Equalizer adjustments are coarse.

Description			
I've noticed that the equalizer settings are quite coarse.			
They go from -12 to 12, in a unit I assume is db?			
I find that the levels are too coarse. I often want a level between 0 and +1, but the resolution of the slider is too coarse.			
I wonder if using increments of (say) 0.2 would be more appropriate? But this would probably require #1066 to be addressed too, as the window is very small and fine adjustment would be tricky.			
Thanks.
