Target version:				
Affects version:	4.1			

Description

My audio library contains not only audio files, but files without an extension and text files.

Audacious opens them all and of course stumbles and spews an error message whenever it starts to play non-audio files.

It would be great if it was possible to specify the list of allowed extensions, e.g.

mp3;wav;flac;m4a;ogg

Limiting files by extension is already the default setting.

The setting is under Advanced -> Metadata -> Probe content of files with no recognized file name extension. Uncheck that box.
