Description			
<p>Sometimes I want to control what I am listening without waking up the computer. If there is a plugin which servers a website to local network so that I can visit it from my phone to control my music on PC.</p> <p>I found this project that works for foobar2000 and deadbeef</p> <p>https://github.com/hyperblast/beefweb/</p> <p>Can we implement something similar or integrate audacious with beefweb project?</p> <p>Thanks.</p>
