Audacious - Bug #169

Fix setting CPPFLAGS/LIBS in audacious-plugins autoconf script

August 24, 2012 10:56 - Brad Smith

Status:	Rejected		**Start date:**	August 24, 2012
Priority:	Minor		**Due date:**	
Assignee:			**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:				
Affects version:	3.3.1			

Description

The audacious-plugins autoconf script currently sets up CPPFLAGS/LIBS with the
flags from Audacious very early in the script and polluting the environment
which causes some of the autoconf checks to potentially fail. So move setting
CPPFLAGS/LIBS to the very end so as to not pollute the environment but still
provide the flags for the build.

History

How would Audacious CPPFLAGS/LIBS cause autoconf checks to fail?

#2 - August 26, 2012 17:03 - Brad Smith

This line near the very top of the autoconf script...
LIBS="$LIBS $AUDACIOUS_LIBS"

adds libaudclient and libaudgui to LIBS which brings in those libraries and a whole slew of dependencies from them which is then polluting the linking
environment for the autoconf tests. There is no reason these libs should be added like this so early on. Move them to the very end after running all of
the autoconf checks.

#3 - August 26, 2012 22:39 - John Lindgren

You haven't answered my question.

#4 - September 07, 2012 23:38 - John Lindgren

- Status changed from New to Rejected

Closing, not a bug.
