

## Audacious - Feature #18

### Rework queue manager - show it as a separate ("system") playlist

#### Description

In most other audio jukebox'es queue manager is implemented as a special system playlist (e.g. called "Play Queue").

This solution has several serious advantages:

- 1) You can see all queued songs at a glance
- 2) There's no need to clutter the interface with an extra queue column in a playlist
- 3) You can easily wipe the queue and reorder the songs to be played

If this feature request is to be implemented then the queue column can be safely dropped/removed altogether freeing space and making the UI less cluttered.

Just rejected? OK, John, I'm not going to file any new feature requests - it seems like your vision of Audacious UI is the only right one. It makes sense to publicly announce this policy - "No serious UI feature requests are accepted, we know better how Audacious should work and look like".

Cheers.
