#### Description

A plugin Find lyrics for sound recognition.

And a feature for be able to search in plugin RyricWiki typing the song name, because depending on how is the file named, has no way to find the lyric.

#### History

I don't understand what you are saying. Please ask someone with better English to translate for you. I am sorry that we can't accept bug reports in your native language, whatever that may be.

I am sorry for my bad English, I'll try to explain better.

A plugin in Audacious as resources similar to these:

Midomi <http://www.midomi.com/objects/midomiLandingVoiceSearch.swf>

Audigle <http://www.audiggle.com/>

Tunatic <http://www.wildbits.com/tunatic/>

This link above are exemples.

- Status changed from New to Rejected

Thank you for the examples, I understand what you are asking for now. I do not think an audio fingerprinting feature fits well in a program intended to be simple and lightweight.

Да, было бы неплохо интегрировать то тот же Tunatic (<http://tunatic.ru/>) в систему

John, I can take a look and implement it. Could you please elaborate what plugin APIs I should use to intercept portion of audiostream ? I'd like to detect songs when I'm listening to streaming radio so opening source audio file is not an option. References to relevant pieces of code at <https://github.com/audacious-media-player/audacious-plugins> would be helpful. Thanks!
