

Audacious - Bug #186

/usr/local install not found by audacious-plugins ./configure

September 29, 2012 06:47 - dontregister dontregister

Status:	Rejected	Start date:	September 29, 2012
Priority:	Minor	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Affects version:	3.3.2		
Description <p>So, I downloaded the tar.gz for audacious and audacious-plugins, extracted them into their folders and started compiling audacious-3.3.2. ./configure says it's going to install into /usr/local (see attached), "make" runs without errors and so does "make install". I then go into audacious-plugins-3.3.2, start ./configure and it complains that audacious is not installed (see attached). So I "make uninstall" audacious. After trying different things, I finally use "./configure --prefix /usr/" for audacious, reinstall and audacious-plugins ./configure works.</p> <p>I don't know whether I have a problem with my global variables (or configs etc.), or there is a problem with the plugins configure.ac. If you can't reproduce this, I may have to look more carefully. Any pointers would be helpful.</p> <p>I'm using Sabayon 10 kde i686. (Sabayon packages 3.3.0, but I have uninstalled it.)</p> <p>(PS: I trimmed the configure outputs, let me know if you need the whole thing.)</p>			

History

audacious-plugins uses pkg-config to detect whether Audacious is installed. Have you set up pkg-config to look for .pc files under /usr/local?

For example:
\$ export LD_LIBRARY_PATH=/usr/local/lib
\$ export PKG_CONFIG_PATH=/usr/local/lib/pkgconfig

Also, you should ask on the forums first for help with building Audacious, until you are sure that the problem is caused by a bug in the build scripts rather than by user error.

#2 - September 29, 2012 18:14 - dontregister dontregister

Yes, that was it. Sorry about the erroneous bug report.

#3 - September 30, 2012 21:56 - John Lindgren

- Status changed from New to Rejected
