Description			
<p>While trying to play a di.fm stream on my Ubuntu 12.10 Audacious install, I am unable to play with the pls file provided by di.fm. The pls file contains:</p> <pre>[playlist] NumberOfEntries=7 File1=http://stream-70.shoutcast.com:80/listen.pls?sid=1 Title1=Digitally Imported - Vocal Trance Length1=-1 File2=http://stream-111.shoutcast.com:80/listen.pls?sid=1 Title2=Digitally Imported - Vocal Trance Length2=-1 File3=http://stream-134.shoutcast.com:80/listen.pls?sid=1 Title3=Digitally Imported - Vocal Trance Length3=-1 File4=http://stream-142.shoutcast.com:80/listen.pls?sid=1 Title4=Digitally Imported - Vocal Trance Length4=-1 File5=http://stream-175.shoutcast.com:80/listen.pls?sid=2 Title5=Digitally Imported - Vocal Trance Length5=-1 File6=http://stream-180.shoutcast.com:80/listen.pls?sid=1 Title6=Digitally Imported - Vocal Trance Length6=-1 File7=http://stream-196.shoutcast.com:80/listen.pls?sid=1 Title7=Digitally Imported - Vocal Trance Length7=-1 Version=2</pre> <p>Upon trying to play one of the streams the error "No decoder found for http://stream-70.shoutcast.com:80/listen.pls?sid=1." is received.</p> <p>I then tried to manually open the URL of http://stream-70.shoutcast.com:80/listen.pls?sid=1 but to no avail. Finally, after some assistance from the IRC channel, we managed to get it going by dropping the ?sid=1 portion of the URL.</p>
