Description

Hi.

First of all thanks for your great software - love it. :-D

Up to now Audacious has been working perfectly with Debian testing. However since the last update (through synaptic) a few days ago to Version 3.3.4.-2, Audacious doesn't start any more. I am not sure if it is really a bug as there seems to be some compatibility problems? (sorry I am a newbie on Linux) ...

Here my Terminal output when trying to start Audacious:

http://packages.debian.org/jessie/audacious-plugins

audacious-plugins is still 3.2.4 but should be 3.3.4.

Oh, yes. You are absolutely right. Thanks a million and sorry for a false bug report. :-/
Is there any way of closing this threat or will it be done automatically?
Thanks again!!! ~ Rob
