

Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Bug #311

Cannot add non-LATIN-named files via file chooser

June 22, 2013 19:31 - Andrew Borodin

Status:	Rejected	Start date:	June 22, 2013
Priority:	Major	Due date:	
Assignee:		% Done:	0%
Category:	libaudgui	Estimated time:	0.00 hour
Target version:			
Affects version:	3.4-beta2		
Description Playing with audacious from repo (c268ba081ed8399b82eeaff54fb3d301cceb4849). My locale is KOI8-R. I use Winamp interface with default skin. When I play file with Russian name via command line: audacious ./Ночь.mp3 everything is fine. File is added to the list and can be played. When I try add that file via file chooser, I get following errors: Cannot convert filename to system locale: /home/andrew/work.c/audacious/INSTALL_ROOT/bin/Ночь.mp3 Cannot convert filename to system locale: /home/andrew/work.c/audacious/INSTALL_ROOT/bin/Ночь.mp3 Invalid UTF-8: Ночь and file is actually not added and cannot be played. My previous version of audacious was 2.5.0 and it worked correctly.

- Status changed from New to Rejected

This is a bug in GtkFileChooser, which fails to encode filenames in UTF-8 before converting them to URIs. See <http://redmine.audacious-media-player.org/boards/1/topics/542> for further discussion.
