Target version:	3.6			
Affects version:				

Description

Proposal: AppData files in all application packages?
https://lists.fedoraproject.org/pipermail/devel/2013-September/188799.html

History

#1 - September 27, 2013 21:29 - John Lindgren

From what I can see, this XML file would only be used by Fedora and specifically by GNOME Software on Fedora. Is that correct?

#2 - September 27, 2013 22:00 - Michael Schwendt

No. It is related to AppStream, which is a cross-distro effort. The metadata is DE-agnostic, so it's not specific to the GNOME Software Center (aka "gnome-software") that is being developed.

#3 - September 28, 2013 00:28 - John Lindgren

"Cross-distro effort" sounds like a PR buzzword to me, but regardless, if you want to write such a file, it could go under contrib/.

#4 - September 28, 2013 12:04 - Michael Schwendt

That may be true, but actually there have been/are other dists involved, and Fedora is late in the game:
http://blog.tenstral.net/2013/05/packagekit-appstream-and-listaller-a-status-report.html

Creating such a file from the example is simple. It would be more beautiful with an official screenshot and an updatecontact address. There's no need to rush IMO.

#5 - November 03, 2013 14:16 - Michael Schwendt

This is what I've added today:
http://pkgs.fedoraproject.org/cgit/audacious.git/plain/audacious.appdata.xml

Note that I have not specified an upstream contact email address and have not enabled the upstream screenshot.

#6 - January 22, 2015 17:49 - Thomas Lange

- Status changed from New to Closed

- Target version set to 3.6

Thanks for the template Michael.
I have updated it to comply with the latest specification and added three screenshots.
