

Audacious - Bug #404

Audacious adds itself as a default inode/directory application

Affects version: 3.4.3	

Description

Hi everyone,

this bug is driving me crazy. I am using Arch with Gnome 3.10.3 and Audacious (v 3.4.3 (Arch Linux)) configures itself as a default* inode/directory* application.

I manually changed this editing the `/usr/share/applications/mimeinfo.cache` file but every time I restart the computer Audacious changes it back again.

From my point of view it should be Nautilus and not Audacious which handles the inode/direcory:inode/directory=*nautilus.desktop*;anjuta.desktop;

Thank you very much, I really like what you are doing!! Keep it up!!
Daniel.

History

#1 - February 16, 2014 20:04 - Mathias Lindner

The same in Manjaro.

Go to [\[\[http://forum.manjaro.org/index.php?topic=10587\]\]](http://forum.manjaro.org/index.php?topic=10587) for some information how to fix this for your installation.

However, this should be corrected in the source.

#2 - February 16, 2014 22:39 - Thomas Lange

This was initially added to fix [#102](#).

#3 - February 17, 2014 15:38 - John Lindgren

- Status changed from New to Rejected

Already discussed as <https://bugs.archlinux.org/task/30034>. Not a bug.
