Description

Please add read support for the Lyrics3v2 tag to Audacious.

The ID3v1 specification only allows 30 characters for title, artist, album and comment fields.

The Lyrics3v2 tag was commonly used to allow one to go beyond this 30 character limit, all the way up to 250 characters.

Suggestion: read the Lyrics3v2 tag when only a ID3v1 tag exists, as ID3v2 does not have this 30 character limit. Should not be to hard to add (perhaps in id3v1.c?).

Although the Lyrics3v2 tag is almost unused these days, a lot of people (like me) might have thousands of ID3v1 only mp3 files that contain the Lyrics3v2 tag. Re-tagging to ID3v2 would be very time consuming.

For the sake of backwards compatibility, please add (read) support for the Lyrics3v2 tag! :-)

I was looking at this and the spec is confusing. Also, can you include a copy of a file with a Lyrics3v2 file?

Thanks.
