**Description**

Hello,

As a long time Audacious user (since version 2.1) in Linux and Windows, from time to time I write here to report some issues. These are the latest I found:

1) I tried to reproduce this radio station (Radio del Plata, from Argentina)

mms://active.telecomcdn.com/delplata/delplata

And I realize it is working correctly in VLC and Windows Media Player, but it doesn't work in Audacious. I haven't test if the problem applies to the Linux version as well, but at least in Windows is not Working.

Thanks for your attention!

VLC in Linux doesn't play it either.  Wireshark shows the server causing various TCP errors (with either Audacious or VLC).  It's unlikely to be a bug in Audacious since we don't touch anything at such a low level.  I'd suspect a bug in libmms, but I don't know the protocol well enough to tell you exactly what the problem is.
