

## Audacious - Bug #490

### Title is not displayed

December 12, 2014 11:29 - Nuno Dias

<b>Status:</b> Rejected	<b>Start date:</b> December 12, 2014
<b>Priority:</b> Major	<b>Due date:</b>
<b>Assignee:</b>	<b>% Done:</b> 0%
<b>Category:</b>	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	
<b>Affects version:</b> 3.5.2	
<b>Description</b>	
In the tab title, instead of the title the name of the file is displayed. I have this problem in Fedora 21 (x86_64), I compiled audacious from the source.	

### History

#### #1 - December 12, 2014 15:37 - Thomas Lange

Do you mean the playlist tabs?  
Please add a screenshot of the issue.

#### #2 - December 12, 2014 15:58 - Nuno Dias

- File 38.png added

Yes, the playlist tabs, Title, Artit, etc, you can see in the attach screenshot.

#### #3 - December 12, 2014 19:34 - John Lindgren

Please do the following:

1. Move ~/.config/audacious to another location to start with default settings.
2. Run "audacious -V > log.txt 2> err.txt".
3. Add a single one of your MP3 files to the playlist and start playing it.
4. Close Audacious.
5. Attach log.txt and err.txt to this bug report.

#### #4 - December 12, 2014 20:11 - Thomas Lange

I guess the mp3 files simply have an empty ID3 tag.  
How do you stream/download them?

By the way, Fedora also packages Audacious. Why do you compile it from source?

#### #5 - December 15, 2014 12:27 - Nuno Dias

Moving the ~/.config/audacious allowing to create a clean configuration solved the problem.

#### #6 - December 15, 2014 12:44 - Michael Schwendt

Fedora 21 (x86\_64), I compiled audacious from the source.

Just as a personal exercise or because of anything particular?

Note that Fedora 21 includes Audacious 3.5.2 with the MP3 and other plugins being available at RPM Fusion.

Audacious 3.6-alpha1 is available for Fedora 21, too, minus the plugins RPM Fusion would ship, of course:  
<https://copr.fedoraproject.org/coprs/mschwendt/audacious-next/>

**#7 - December 15, 2014 15:26 - Nuno Dias**

Well, the version in Fedora is not always the last, so I compile the last myself, yes I know right now is the same, but give it a few months and usually the Fedora package is not the last stable version.

Moving the ~/.config/audacious allowing to create a clean configuration solved the problem.

Can you upload .tar.gz's of the old and new configurations so I can compare them?

**#9 - December 15, 2014 17:34 - Nuno Dias**

- File *audacious-ok.tgz* added
- File *audacious-bad.tgz* added

File in attach as requested

**#10 - December 21, 2014 17:36 - John Lindgren**

If you go back to the old configuration and refresh the playlist (F5), do the titles show up?

**#11 - December 22, 2014 18:22 - Nuno Dias**

No effect, nothing happens, but when I run audacious from the comand line and press F5, I get this

Cannot convert from locale (UTF-8): Dissecting the Politics and Money Behind Health Care  
Cannot convert from locale (UTF-8): Science Friday  
Cannot convert from locale (UTF-8): 06/07  
Cannot convert from locale (UTF-8): Science Friday Audio Podcast  
Cannot convert from locale (UTF-8): 2014-09-18T19:00  
Cannot convert from locale (UTF-8): Podcast  
Cannot convert from locale (UTF-8): In The Cost of Cutting, private practice surgeon Paul Ruggieri delves into the shadowy ways money influences health care.

After some debug, filling the "Fallback character encodings:" with ISO-8859-15 the refresh works, and I have the titles.

**#12 - December 22, 2014 23:23 - John Lindgren**

- Status changed from New to Rejected

Aha. ISO-8859-1 is the default fallback, which would probably work also.
