Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Bug #504

Segfault on Saving Playlist with bad locale file metadata

January 22, 2015 22:17 - Daniel Bedrenko

		100% 0.00 hour
uncheck "Do not load metadata ve the playlist "test.audpl"	Estimated time:	
uncheck "Do not load metadata ve the playlist "test.audpl"	[]"	0.00 hour
ve the playlist "test.audpl"		
 1) Open the attached audio file 2) Go to Playlist -> Export and save the playlist "test.audpl" or 2.1) Just exit audacious (this automatically saves the open playlist tabs). This crashes the program (thus many things like any config changes or playlist changes are lost). Sometimes if I load some of these bad files after ~5 mins it crashes by itself (does Audacious periodically save the tab playlists?). When this track is added audacious spits out this in STDERR (I guess it's the track's title metadata): Cannot convert from locale (UTF-8): L. Here is the backtrace: ====================================		
bsf () from /usr/lib/libc.so.6		
f	8): L. V, Segmentation fault.	8): L. V, Segmentation fault. () from /usr/lib/libc.so.6 _bsf () from /usr/lib/libc.so.6

History

#1 - January 23, 2015 02:33 - John Lindgren

- Category set to libaudcore
- Status changed from New to Closed
- Target version set to 3.6
- % Done changed from 0 to 100

The segfault is fixed in the Git version already. What you need to do to fix the "Cannot convert from locale" error is to add "ISO-8859-1" as a fallback character encoding (File -> Settings -> Playlist -> Fallback character encodings). This should also prevent the segfault in 3.5.2.
