Description

The Library (search / refresh) functionality in Audacious is not able to handle collections using single-Flac + cuesheet albums. This is a typical use case for classical music collections.

In my 3K+ album collection, every album is in a single-flac file with no tags in it, with a cuesheet file. Audacious can playback any cuesheet that is manually opened or via drag&drop with no problems.

However, when activating the Search plugin and then scanning the Music directory, only the "flac" files are added as a single "song" and the cuesheets are just ignored.

In order to handle this scenario, a single plugin/configuration option would be needed (in addition to adding actual processing of cuesheets when scanning the library): "Ignore flac files if they have no tag when scanning the library"
