#### Description

It does not look like starting Audacious 3.6 with the qtui would apply the system's qt theme.  
I'm on Ubuntu 14.04 and use the Audacious package from ppa:nilarimogard/webupd8 (Webupd8 paa).

Am I missing some packages or is this not implemented yet?

Greetings  
Andy

#### History

Sry plugins/qtgui category.

##### #2 - March 04, 2015 23:14 - John Lindgren

Does the theme support Qt 5?

##### #3 - March 05, 2015 07:35 - Andy Lembke

I guess not as Ubuntu's KDE is based upon qt 4.8.6.  
Ok that would explain it. So it's a won't fix?

##### #4 - March 05, 2015 14:11 - John Lindgren

- Status changed from New to Rejected

You'll need to talk to the theme authors about getting it updated.
