Category:			**Estimated time:**	0.00 hour
Target version:				
Affects version:	3.6			

Description

Not sure if this is even possible, as it appears to be a proprietary format, but it would make migration from AIMP to Audacious considerably less of an undertaking.

Obviously, if not possible, feel free to close immediately, I don't mind. I just don't have the coding skill to know if it's feasible or not.

In my case, specifically relevant in the Linux version, but I am trying to consolidate with one program on multiple platforms, and this is a barrier, as my playlists took quite a while to build.

- Status changed from New to Rejected

I can't find any documentation on the format. We support several common formats, so perhaps you can export to one of those formats from AIMP.
