Description

sistem asus k50in
os ubuntu 14.10
kernel 3.16.0-33
pulseaudio 1.4.0

audacious crash when i activate plugin Dynamic Range Compresor

Mar 27 01:56:13 darkzone kernel: [83286.126995] audacious: segfault at 7fa7b1707000 ip 00007fa7b1706614 sp 00007fa7c4f42b30 error 4 in compressor.so[7fa7b1705000+2000]

History

#1 - March 27, 2015 15:53 - daniel g
whit audacious 3.5.2 I do not have this problem

#2 - March 29, 2015 11:34 - Chaden Cross
make sure you have installed the latest version and if this does not help de-install the whole software and install it new...

#3 - March 29, 2015 18:51 - John Lindgren
Please provide a backtrace.

#4 - March 30, 2015 20:53 - Thomas Lange
- Subject changed from crash audacious to Enabling the Dynamic Range Compresor plugin causes a segfault
- Assignee deleted (daniel g)
- Target version deleted (3.6.1)
- Affects version 3.6 added
- Affects version deleted (3.6.1)

I could not reproduce the crash with Ubuntu 14.10 and Audacious 3.6 from the WebUpd8 PPA. How did you install Audacious?

#5 - March 31, 2015 12:48 - daniel g
Audacious is installed form ppa WebUpd8.
@John Lindgren could you help whit backtrace

There's a lot of noise there but no backtrace. In case you couldn't find it in the tutorial, the gdb command to get a backtrace is "backtrace".

Are you still interesting in having us look into this problem? If so, we need a backtrace.

Program received signal SIGSEGV, Segmentation fault.

Okay, this is progress, but you apparently have a version of Audacious with no debug symbols. See if there is an audacious-dbg package you can install.

i installed audacious-dbg and audacious-plugins-dbg (now version is audacious 3.6.1)

gdb) bt full
