<b>Description</b>			
Hi.			
I'm using Linux Mint 17.1 and Audacious 3.6.1.			
While playing music, My OS hibernates.			
I thinks that Audacious should prevent hibernations while playing music.			
While Audacious running, no need it.			

#### History

##### #1 - July 10, 2016 06:49 - John Lindgren

- Tracker changed from Support to Feature

- Subject changed from My OS hibernates while playing music. to Inhibit sleep modes during playback

I think this is possible in at least GNOME or KDE by integrating with the desktop's power management service. A small plugin could be added to do this. Patches would be welcome.

##### #2 - May 12, 2018 16:59 - Jim Turner

Wouldn't it just be easier to just wrap Audacious in a little BASH script that first does whatever you need to "block" hibernation, then invoke Audacious; then when Audacious exits, the script will "unblock" hibernation? Then set your launcher to launch that script instead of Audacious itself?

Regards,

Jim
