

Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Bug #565

fliewriter plugin causes lost of data

August 07, 2015 23:57 - tuxun tuxun

Status:	Rejected	Start date:	August 07, 2015
Priority:	Minor	Due date:	
Assignee:		% Done:	0%
Category:	plugins/filewriter	Estimated time:	0.00 hour
Target version:			
Affects version:	3.4.3		
Description			
Hi, I just noticed than the filewriter plugin doesn't check if the file exist before writing in it.			
Consecutives records could causes lost of previously recorded data if the filename still is the same.			
Anyway thanks for all!

Please update to the current version (3.6.2) and check whether the problem still exists. If so, then give exact steps to reproduce and also attach your config file (found in ~/.config/audacious/config).

It works!

When I choose <<original file tag>> option as destination filename, it adds a number of version in the recorded filename.

But when I choose <<original file name>> (I'm recording radio stream), the filename start with ";" (";stream-1";";stream-2";";stream-3"... (so I wouldn't delete them via command-line).

Nice job!

I used the WebUpd8 PPA to update from Mint, so thanks to him too ;)
