Opus files are currently played through FFmpeg. Do you know if FFmpeg has any sort of album art support built-in, or would this require adding new parsing code to Audacious?

#2 - July 10, 2016 06:23 - John Lindgren

- Category set to *plugins/ffaudio*

#3 - July 11, 2016 11:34 - Artem S. Tashkinov

There's no API for retrieving the album art specifically.

I'm very new to audacious (just giving it a try) and also would like to have audacious show cover art for/from opus files.

Ogg vorbis and opus both use vorbis comments. So my guess is that it should be no big effort to use the ogg mechanism for opus, too. I have a little experience how other players handle this (but they used taglib) and tweaked them to support opus files. Unfortunately I'm somehow lost where to look in the audacious source for this...

AVStream::attached_pic seems to be what we want.
