Target version:				
Affects version:				

Description

Hi, thanks a lot for your support.
I would like to point out that the help of audtool is not complete.
Following the feature request #641, that has been correctly rejected from you (sorry about that), I now see that the
"--set-current-playlist-name" is missing from the help.

$ audtool --help | grep "set-"

Thanks
Frank

- Status changed from New to Rejected

Not missing here. It looks like you are using an outdated version. You should always update to the current version before reporting any bugs.

```
$ audtool --help | grep "set-"
  set-current-playlist           - make given playlist current
  set-current-playlist-name      - set current playlist title
  set-volume                     - set current volume level in percent
  equalizer-set-preamp           - set equalizer pre-amplification
  equalizer-set-band             - set gain of given equalizer band
```
