<b>Description</b>			
<p>Situation: Create two playlist (Play1 and Play2) with some song in them (Song1, Song2, ..SongN). Start playing Play1/Song1 and request audtool the current song with "audtool --current-song". Result ok. Lets Play1/Song1 playing but select Play2 and ask again the current song. Result is wrong. It reports the currently SELECTED song and not the one is playing. Lets Play1/Song1 playing but select back Play1. Now audtool report again correctly.</p> <p>I don't know...maybe is the help that is wrong and should say "currently selected song"...but then, which is the command to actually have the playing song?</p> <p>Thanks, Frank</p>
