

Audacious - Bug #699

[Qt] Proper .desktop file and correct window metadata missing

January 31, 2017 00:30 - Q. P.

Status:	Rejected	Start date:	January 31, 2017
Priority:	Minor	Due date:

Target version:			
Affects version:			
Description			
Hi,			
adding a KDE Plasma icon-only task manager launcher for the Qt interface of Audacious is not possible.			
The KDE devs said "[...] The application author has to install a proper .desktop file and mark up the window with correct metadata so we can map to it [...]", see:			
https://bugs.kde.org/show_bug.cgi?id=375744			
So, could you please do that?			
Regards

We do install a .desktop file. It is not "missing". If you want the Qt interface to be launched by default, you can edit the .desktop file yourself and make it so.

Not a bug.
