

## Audacious - Feature #711

### Support HTTPS and redirect to it by default

March 15, 2017 18:41 - Thomas Lange

#### Description

Recent browser versions of Firefox [1] and Chrome show a warning in login pages with an insecure connection. And since Let's Encrypt [2] provides free TLS certificates, there is no excuse for not supporting HTTPS.

#### History

##### #1 - January 05, 2018 09:16 - David Griffith

This is my favorite client for getting and maintaining certificates: <https://github.com/svrco/getssl>  
It's very easy to use, has no dependencies (written in bash), and is very lightweight.

- % Done changed from 0 to 100

- Status changed from New to Resolved

All Audacious' websites force HTTPS connection.

##### #3 - January 22, 2018 18:44 - Thomas Lange

Thank you Michał.

##### #4 - February 28, 2018 15:10 - Michał Lipski

- Status changed from Resolved to Closed
