

Audacious - Bug #766

Files not deleted physically when using "Service, delete selected files"

January 15, 2018 01:26 - Rafael Linux User

Status:	Rejected	Start date:	January 15, 2018
Priority:	Minor	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Affects version:	3.9		
Description			
From some version to latest, Audacious deletion is no deleting files physically, only in the playlist. Audacious 3.9 on OpenSUSE 42.3			

History

#1 - January 15, 2018 14:39 - John Lindgren

"From some version to latest"

Be more specific. What is the last version that works for you?

Please attach:

- 1) Your configuration file (\$HOME/.config/audacious/config)
- 2) The output of "audacious -V" when trying to delete a file

#2 - January 15, 2018 14:39 - John Lindgren

- *Category deleted (core)*

#3 - January 15, 2018 23:29 - Rafael Linux User

I noticed the issue recently, but can't be sure on which version it began to fail, cause my system updated at least three times in past months, and I don't know how much times Audacious was updated.

1) configuration output

2) As you can see at the end of output, it says cannot find trash folder. The folder where the files are, is an NFS shared folder, with r/w privileges. I'm working on KDE.

Gtk-Message: GtkDialog mapped without a transient parent. This is discouraged.

#4 - January 16, 2018 02:38 - John Lindgren

- Status changed from New to Rejected

"No se pudo encontrar o crear la carpeta de la papelera" (Google Translate: "The trash folder could not be found or created") is an error coming from GLib. It could be caused by insufficient permissions, that's my guess. Not our bug, anyway.

#5 - January 16, 2018 21:48 - Rafael Linux User

Let me say first of all that I'm sorry I didn't notice the message was in Spanish, my fault ;)

I take my time to check which is the problem. Any program (Dolphin, Puddletag, Ocenaudio, ...) can read/write (and delete from Puddletag too) without any issue files stored in that NFS folder. Anyway, there is an error in the deletion service of Audacious: It doesn't warn user about the task was not successfully done. Instead, Audacious delete the song entry from the playlist and the user assumes the work is done. It should warn the user that the task is failing.

In my case, Audacious is trying to send the file to the trash folder but, for some reason, it is not able, so I solved this issue with a trick: I configured the Audacious "Delete files" service to delete the file immediately, instead of try to move to trash folder.

Should I open a distinct title bug for this issue?

Irrelevant. If GLib cannot trash the file it's not our bug. Talk to the GLib developers.

Anyway, there is an error in the deletion service of Audacious: It doesn't warn user about the task was not successfully done.

The log proves you wrong. It did warn you.

Instead, Audacious delete the song entry from the playlist

We should probably not delete the song from the playlist in that case, I agree.

Glib developers provide exception handlers, but is the programmer who must manage those exceptions.

The log proves you wrong. It did warn you.

I'm not wrong. I said "... *there is an error in the deletion service of Audacious: It doesn't warn user ...*" USER, not developer or programmer of Audacious. As user, I will never launch "audacious -V" to guess what's going wrong. As user, I only trust that Audacious will do what I order and, in this case, there is no warning from Audacious to the simple USER about things went wrong. So I'm not wrong about what I told as user.

We should probably not delete the song from the playlist in that case, I agree.

That should is enough for users and will solve the issue, but I'm sure is a lot of work for Audacious developers, so thanks in advance for your work, sincerely.

The log shows that `audgui_simple_message()` displayed an error message to you, like this one:

Screenshot_2018-01-17_07-55-13.png

Did you ignore that? Or maybe your desktop environment is broken and hid it from you?

Also, if you can't be troubled with basic diagnostics like looking at a log file, stop filing bug reports. It's a waste of my time.

After several test, I discovered that a similar window appear, but behind the main Audacious (I usually use GTK interfaz), so my apologies about I didn't realize that fact. If it would have noticed that fact before, I would have told it you in my very first post. I don't like to make anyone waste his time.

Also, if you can't be troubled with basic diagnostics like looking at a log file, stop filing bug reports. It's a waste of my time.

Please, do not misunderstand my words. I'm not troubled with basic diagnostics. I always hear developers words and try to help them following instructions to find out what they need to know. If I'm here, is for notify developers about an issue that I would like to help (like an user) to fix, contributing all info that you require from me.

You took my words in a way not related about I was talking about. I tried to explain you that something is not working fine but it seems you blame me for say, IMHO, logical reasoning, when you said me I was WRONG. But if you can't see that fact, I can't do anything else about it.

Anyway, thank you for wasting your time with my report. Audacious will continue being for me the best audio player despite we don't see thing from the same point of view.

#12 - January 18, 2018 03:56 - John Lindgren

I appreciate the desire to help. Just try to investigate a little more on your own first the next time.
