

Audacious - Bug #793

alarm plugin needs rewrite

May 06, 2018 14:40 - Joe Kamprad

Status:	New	Start date:	May 06, 2018
Priority:	Major	Due date:	
Assignee:		% Done:	0%
Category:	plugins/alarm	Estimated time:	0.00 hour
Target version:			
Affects version:	3.9		

Description

When i enable the alarm plugin it force to enable an alarm, set to the time i do enable the plugin.
This can be very annoying if you do not remember this (or first time users).
Alarm should be not be enabled without active setting it.

History

#1 - June 30, 2018 02:05 - John Lindgren

The current alarm plugin has several serious problems:

- Unsafe use of pthread_cancel() -- on a thread calling into GTK!
- Heavy use of GTK, which we are moving away from in favor of Qt
- Usability issues such as this one

In a future version we'll probably just remove it. A replacement shouldn't be terribly hard to write.

#2 - June 30, 2018 02:07 - John Lindgren

- *Category set to plugins/alarm*
- *Subject changed from alarm plugin (audacious 3.9) enables alarm automatic after enable the lugin to alarm plugin needs rewrite*

#3 - June 30, 2018 02:08 - John Lindgren

- *Priority changed from Trivial to Major*
