Description
When I enable the alarm plugin it force to enable an alarm, set to the time I do enable the plugin. This can be very annoying if you do not remember this (or first time users). Alarm should be not be enabled without active setting it.

History
#1 - June 30, 2018 02:05 - John Lindgren
The current alarm plugin has several serious problems:
- Unsafe use of pthread_cancel() -- on a thread calling into GTK!
- Heavy use of GTK, which we are moving away from in favor of Qt
- Usability issues such as this one

In a future version we’ll probably just remove it. A replacement shouldn’t be terribly hard to write.

#2 - June 30, 2018 02:07 - John Lindgren
- Category set to plugins/alarm
- Subject changed from alarm plugin (audicious 3.9) enables alarm automatic after enable the lugin to alarm plugin needs rewrite

#3 - June 30, 2018 02:08 - John Lindgren
- Priority changed from Trivial to Major

#4 - September 10, 2022 21:51 - John Lindgren
- % Done changed from 0 to 100
- Target version set to 4.3
- Status changed from New to Closed

It’s been over 4 years and nothing has been done to save the alarm plugin. I’ve removed it:
