Affects version:	3.9			

Description

Right now, there's three options: Track only, Album only, or "based on shuffle". These are fine options, but I think the album option should either be reworked to use the track RG tag if album RG tag isn't present, or there should be another option like "prioritize album". Right now, if you have Audacious on Shuffle Albums, sometimes you will get singles that aren't part of an album. So, those songs may currently play much louder than the albums that were otherwise playing, since those singles may not have an Album Replay Gain tag, only one for Track.

Please see if this is working for you in 3.10-beta1. It should have been fixed by this commit:
https://github.com/audacious-media-player/audacious/commit/5927e6eb3c3ff2871c3d4dbf2266879de29b8b9f

OK. Would there happen to be a Flatpak or Snap package available, or any precompiled binary? If not, I can build it from source -- it may not be available as a Solus package until after it comes out of beta.

We only release source packages. 3.10 is out of beta now though, so you could just ask your distro to package it.

- % Done changed from 0 to 100

- Status changed from New to Closed

- Category set to libaudcore

Fixed in 3.10. Closing.
