Target version:			
Affects version:	3.9		
Description I'm trying to use the audio player Audacious(vrs. 3.9, default in my new Lubuntu 18.04 distro) but the window is very small and hard to read. How may I make it bigger?

Probably you do not have the correct DPI setting for your screen.

I don't use LXDE, but searching Google found this blog post on how to change the setting:
