Playlist search in Qt5 is really slow on huge playlists

August 12, 2018 02:13 - Enne Eziarc

Description
I've got a playlist with just under 150 thousand entries. In Qt5, each keystroke in the Ctrl+F box freezes the UI for several seconds until the results are whittled down to about 10k or less.

In GTK2 the search is instant, which I can understand for the plain UI (it only does a one-at-a-time search, not the same thing) but it's just as fast in the winamp UI too.

It certainly doesn't seem like it should be that slow, even to filter the entire playlist. When I have some time, I'll run it under Valgrind and try to find out where the bottleneck is.

#2 - September 05, 2018 03:45 - John Lindgren
- % Done changed from 0 to 100
- Target version set to 3.10.1
- Status changed from New to Closed
- Category set to plugins/qtui

This change makes a huge improvement (nearly 10x) for me with a playlist of 50,000 entries: https://github.com/audacious-media-player/audacious-plugins/commit/9d162207ef01c5972e4bb718d390e494f0ad0241

I think that's about as good as it's going to get, so I'll go ahead and close this. If it still seems slow to you, and you have a suggestion for improving it further, I'd be interested.
