Audacious - OLD, PLEASE USE GITHUB DISCUSSIONS/ISSUES - Support #824

Fails to properly install from source on CentOS 7.5

August 29, 2018 22:15 - Yao Mitachi

Status:	Closed		**Start date:**	August 29, 2018
Priority:	Minor		**Due date:**	
Assignee:			**% Done:**	0%
Category:	libaudcore		**Estimated time:**	0.00 hour
Target version:				
Affects version:	3.10			

Description

I didn't notice any errors during the configure/install process, but when I went to try to install audacious-plugins: "Cannot find Audacious 3.10". Audacious itself fails to launch with this error:

audacious: error while loading shared libraries: libaudcore.so.5: cannot open shared object

I've attached the terminal output from my attempt to configure and install audacious and audacious-plugins.

The first issue you will need to solve is this: "checking for AUDACIOUS... no". The log claims to have installed audacious.pc, but pkg-config on your system isn't able to find it. It's probably in /usr/local/lib/pkgconfig -- if so, try setting PKG_CONFIG_PATH=/usr/local/lib/pkgconfig, then reconfigure and rebuild audacious-plugins.

Note that you need to configure both audacious **and** audacious-plugins with --enable-qt if you want to use the Qt interface.

The second issue ("libaudcore.so.5: cannot open shared object file") is probably also path-related. The log claims to have installed libaudcore.so. Try to find that file, and determine if it is in the system's shared library path. It's probably in /usr/local/lib or some similar path -- if so, try setting LD_LIBRARY_PATH=/usr/local/lib before you run audacious.

That worked, thanks! I don't have any FFMPEG or AAC libraries, but I think I can do without those.

Uh, huh... I don't think that's supposed to look like that.

Okay, good. Closing.
