Description

I have been maintaining a large collection of themes at http://themes.effx.us for Enlightenment (e16), gkrellm and audacious. I would like to distribute theme archives that are application inclusive for each theme.

Both e16 and gkrellm include search paths that look in $HOME/.themes/{SKIN-NAME}/{APPLICATION-NAME} for theme data. I would like audacious to do the same so I can create tarballs with a .theme suffix for e16 to natively list, extract, and contain skins for these commonly associated "retro" applications to use.

I hope this is a simple and doable change..

Thanks!
